Profile Summary

Graduate student skilled in Python, JavaScript, and React.js with hands-on experience in developing user-friendly web applications. Contributed to a live project by building responsive UI components and explored Artificial Intelligence by creating a React-based AI Web Application

Experience

OEMMart Ptv. Ltd

January 2026 – Present

Engineering Associate

Toronto, Canada

- Lead a 3–4 member automation engineering team, overseeing the development, deployment, and daily operations of 39+ production-grade data automation pipelines across multiple U.S. state platforms.
- Engineered automated workflows for data extraction, database integration, document processing, and AI-powered summarization using Gemini API, with automated document storage and management on Microsoft Azure.
- Built and maintained a reusable automation framework with centralized database management, AI summary orchestration, Azure integration, email notifications, execution wrappers, and robust error-handling mechanisms.
- Monitor and troubleshoot daily production workflows, ensuring pipeline reliability, data accuracy, fault recovery, and operational continuity while coordinating development and maintenance across the team.

Earth Solution Ptv. Ltd

March 2025 – December 2025

Frontend Developer Intern

Pune, Maharashtra

- Faced the challenge of building a user-friendly interface for a React.js SaaS application; solved it by developing and maintaining a responsive frontend that improved usability and accessibility
- Needed a way for users to schedule meetings and manage workspaces easily. addressed this by creating workspace modules and meeting scheduling features, integrating seamlessly with Zoom and Google Calendar APIs.
- Users struggled to quickly access meeting insights. fixed this by implementing an interactive chatbot with knowledge chips, allowing faster and more efficient interaction.

Projects

AI-Powered Resume Analyzer | *Next.js, Python, FastAPI, PostgreSQL, Docker, Github Actions(CI-CD)*

[link](#)

- Architected and developed a full-stack AI web application to analyze and score resumes, implementing a responsive user interface with Next.js and a high-performance backend API using Python and FastAPI.
- Engineered a robust CI/CD pipeline using GitHub Actions to fully automate the testing, building, and deployment processes, significantly reducing manual overhead and ensuring rapid, reliable updates.
- Containerized the application using multi-stage Docker builds for both frontend (Node.js Alpine) and backend environments, optimizing image sizes by utilizing Next.js standalone mode and strategic .dockerignore configurations
- Streamlined deployment workflows and image registry management by leveraging Docker Buildx for advanced layer caching and securely publishing versioned multi-service images to a unified Docker Hub repository.

MCP-Powered AI Developer Assistant | *Python, FastAPI, PostgreSQL, MCP, LLM APIs, AI Agents, NextJS*

- Architected an AI-powered developer assistant using Model Context Protocol (MCP), enabling natural-language interaction with multiple development and collaboration systems through a unified conversational interface.
- Designed and developed custom MCP servers, clients, and tools to integrate services such as Jira, GitHub, Slack, and local development environments, allowing the AI agent to retrieve tickets, inspect repositories, execute development workflows, and communicate results.
- Engineered an LLM-driven tool orchestration layer capable of interpreting user intent, dynamically selecting appropriate MCP tools, maintaining contextual information across multi-step workflows, and consolidating results from multiple external systems.
- Implemented AI-assisted issue resolution workflows to retrieve Jira requirements, analyze relevant source code, propose code changes, execute tests, generate Git diffs, and support human-approved GitHub and team communication actions with permission-aware safeguards.

Education

Walchand Institute of Technology Solapur University

Aug. 2021 – June 2025

Bachelor of Electronics and Telecommunication Eng.

CGPA: 8.8

Technical Skills

React.js, Next.js, Python, MySQL, MongoDB, Agentic AI, Work Flow Automation
